Projects

Help-desk Chatbot for Government Officials This initiative seeks to reduce the isolation faced by people with communication challenges. By leveraging AI technology, it interprets a range of signals, allowing users with disabilities to articulate their ideas effectively. The project not only closes gaps in speech and language But also works to correct societal misunderstandings by raising awareness about diverse communication approaches.	(2023)
Enhanced return process with innovative tracking This project revolutionizes e-commerce return processes through RFID technology, enabling precise product tracking and automated returns. By optimizing inventory management and reducing operational costs, it provides a more efficient and eco-friendly approach to handling returns and logistics in the e-commerce sector.	(2023)

The project aims to create a robust platform, leveraging India Post's extensive network, to bridge the gap between the Indian diaspora and local sellers/MSMEs/artisans in India. This platform will connect Persons of Indian Origin (PIOs) with authentic traditional, ethnic, and handicraft products from India. It will provide a digital marketplace where diaspora members can easily browse, purchase, and request products, ensuring quality and authenticity.

Technical Skills

- Programming | Java, Python ,C
- Frontend | HTML ,CSS
- Database | Mysql

Soft Skills

Leadership
Team Work
Critical Thinking
Problem Solving

Achievement:

- FarmConnect - An platform that connects the world with agriculture
